

RA Wael Says....

Don't Scan Random QR Codes!

Why not?

A random QR Code is like a mystery link. It can potentially send you to fake websites, steal your information, or attempt to install malware.

How can I be safe?

- Only scan codes from people you trust
- Avoid QR codes on random flyers, stickers, or walls
- If it feels too good to be true, it probably is
- Check the link preview!
- When in doubt, look up the website manually

What can go wrong?

- Fake logins that steal your accounts
- Phishing pages that steal your info
- Links that try to download malicious files
- Malicious QR codes that are stuck over real codes on signs and menus.

Protect your device!

- Keep your phone updated!
- Use your devices built in camera to scan QR codes
- Turn off any setting that automatically opens links
- Never download anything from a QR code
